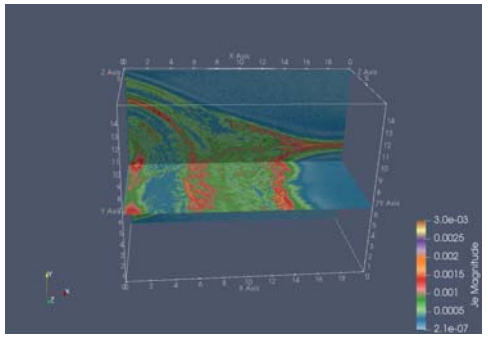
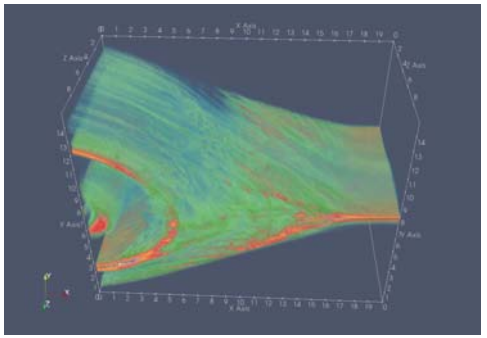
Results form iPic3D Simulations

How 3D reconnection really is

Mi/me=256
B_g=1/10
Grid:1200x450x300
Resolution $\Delta x = d_e/2$
Resolution $\omega_{ce}\Delta t = 1/30$

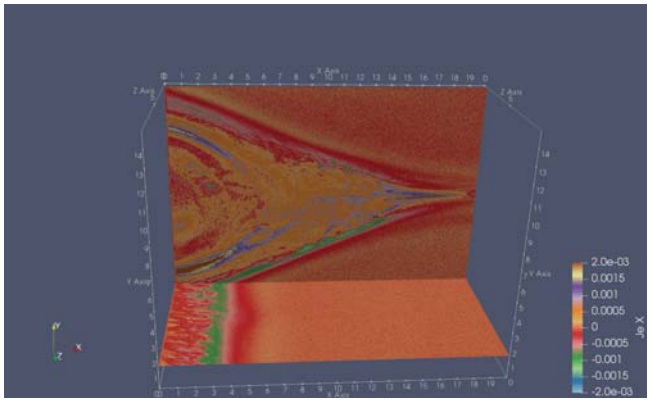


Electron Current Density – Magnitude - Cuts

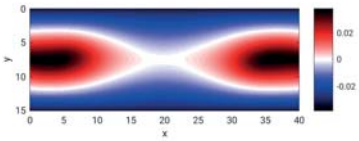


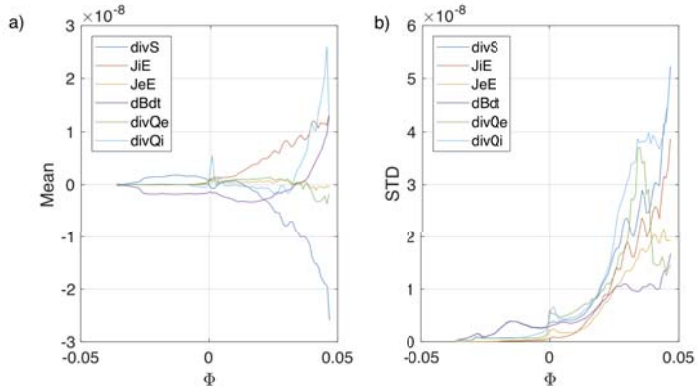
Electron Current Density – Magnitude –Volume rendering

Horizontal (along x, Earth-Sun) Electron current

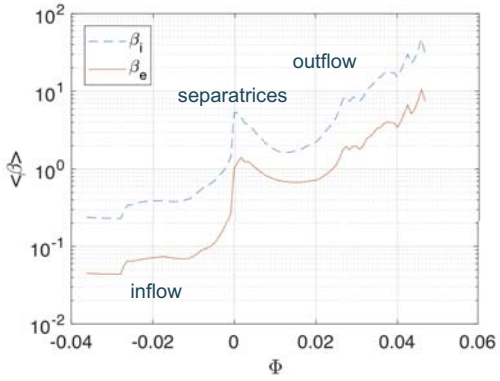


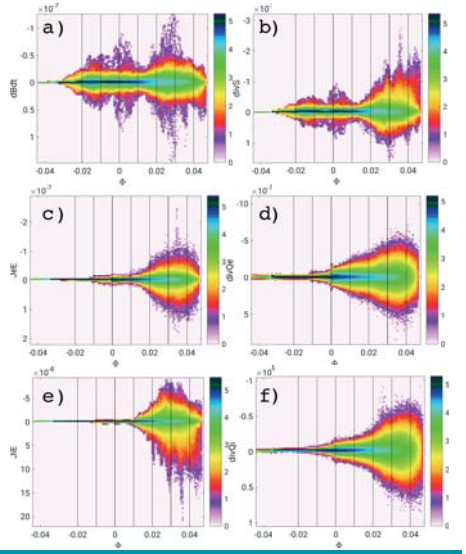
Energy exchanges



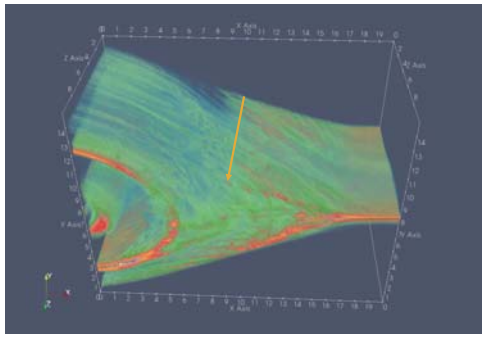


Different regimes of turbulence



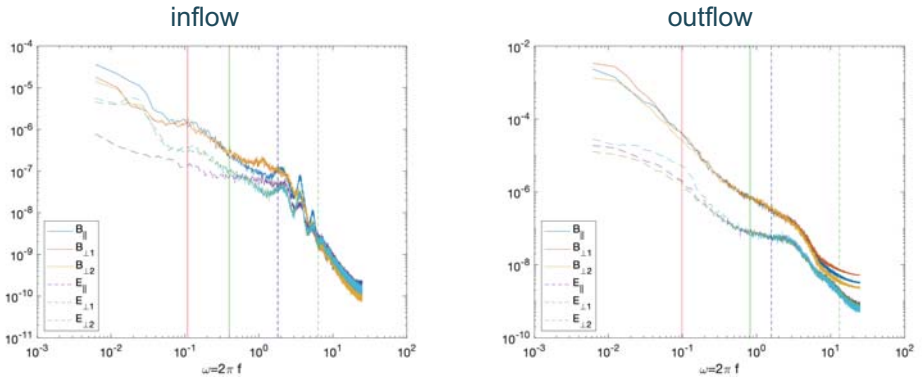


Virtual probes

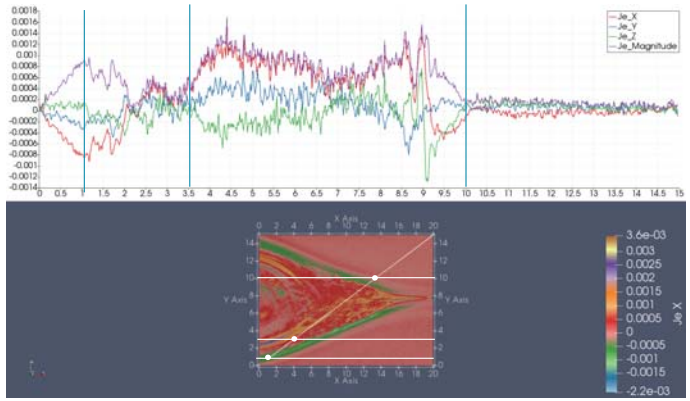


- We set arrays of 3x3x3 probes per computational processors.
- This forms 27 virtual spacecrafts at a given (x,y) location, uniformly spread along z
- From this signal recorded every time step we can make spectrograms and other analysis of fluctuations in time

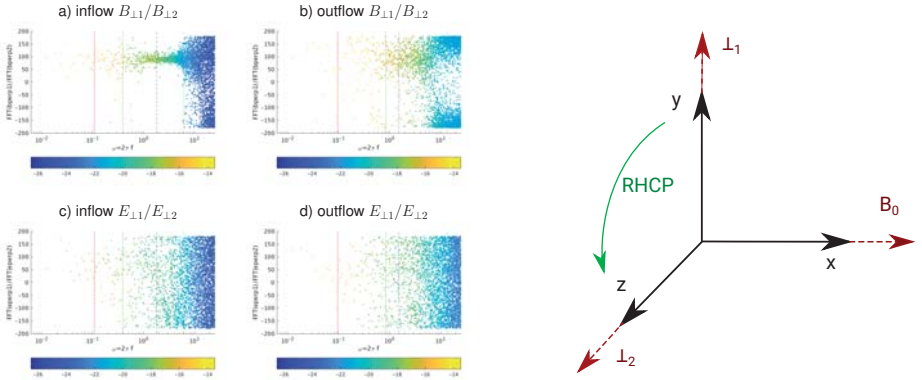
Spectrum of waves – virtual probes



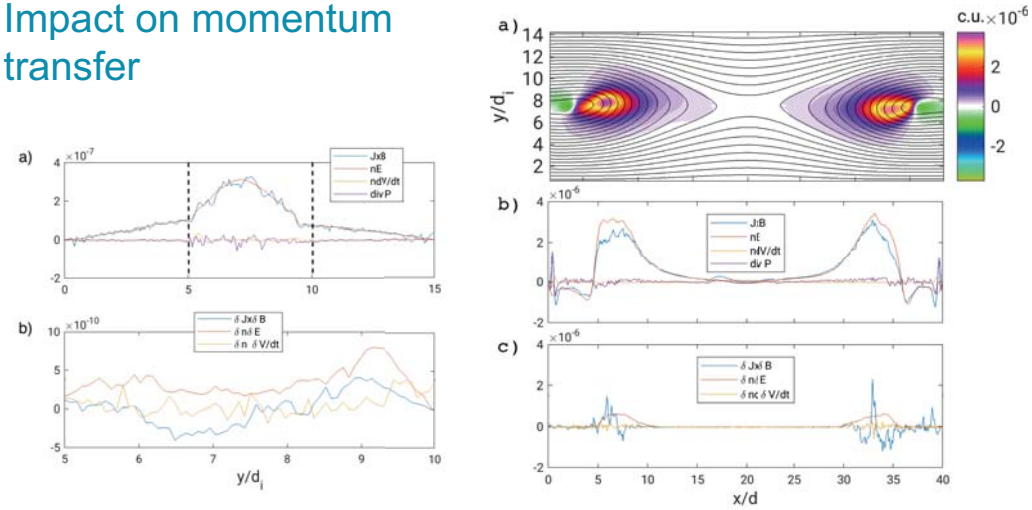
Virtual satellite crossing



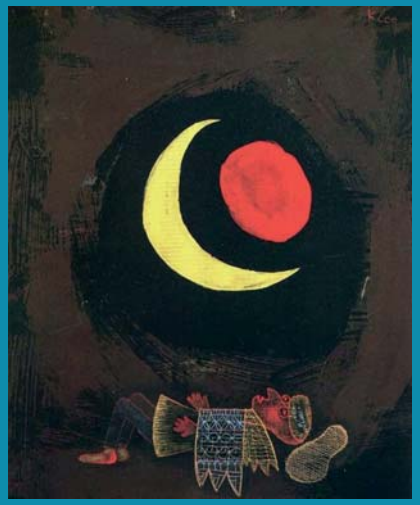
Polarization of the wave



Impact on momentum transfer



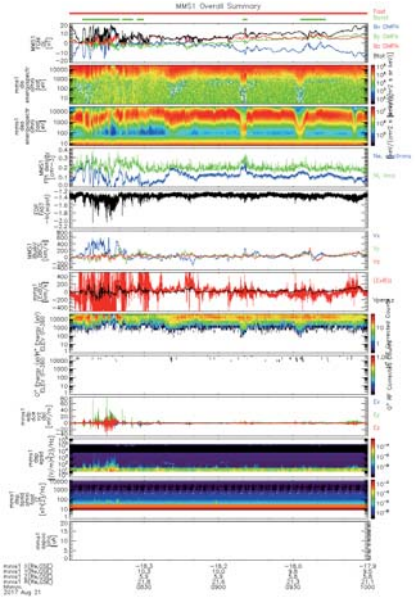
Observations form MMS



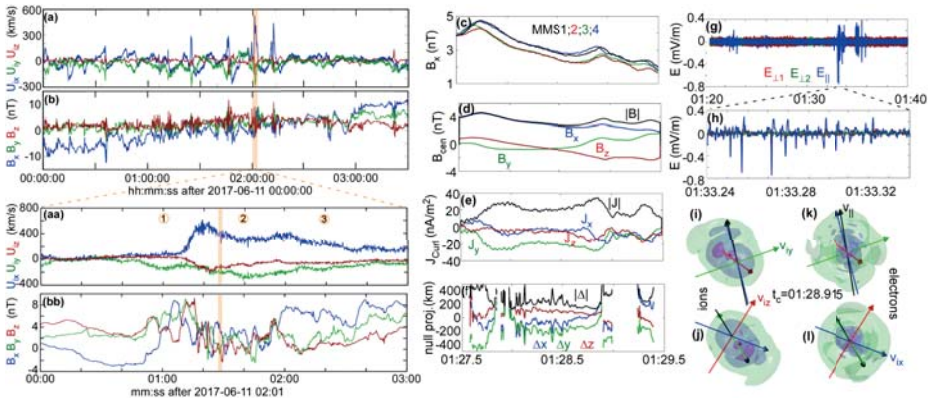
Strong Dream (1929) — Paul Klee

Look from MMS

- We (Stefan Eriksson) identified about 200 crossings in the tail that display turbulent reconnection outflows.
- Here is one example we analysed in more details:



Looking for null points within the turbulence



Conclusions

- Reconnection generates turbulence
  - **Fluctuations** are present all around
  - **Different regimes of fluctuations** in inflow, separatrices and outflow
  - **Fully developed turbulence** in the outflow
  - Waves of **different nature** in the inflow and outflow
  - Turbulence produces **secondary reconnecting layers**
- The impact of these processes is enhanced turbulent **energy exchanges**
- **Momentum** exchange is enhanced in the outflow primarily (anomalous transport)
- **MMS data** shows many turbulent outflows and within them null points can be detected

Acknowledgments

- This work has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776262 (AIDA, www.aida-space.eu).

- Support from NASA Heliophysics Supporting Research (H-SR) Program

- Computing received support from a number PRACE Tier-0 allocations in the EU, from the Flemish Supercomputing Center (VSC), from the Tianhe-2 supercomputer in China and from DOE and NASA computing in USA.
